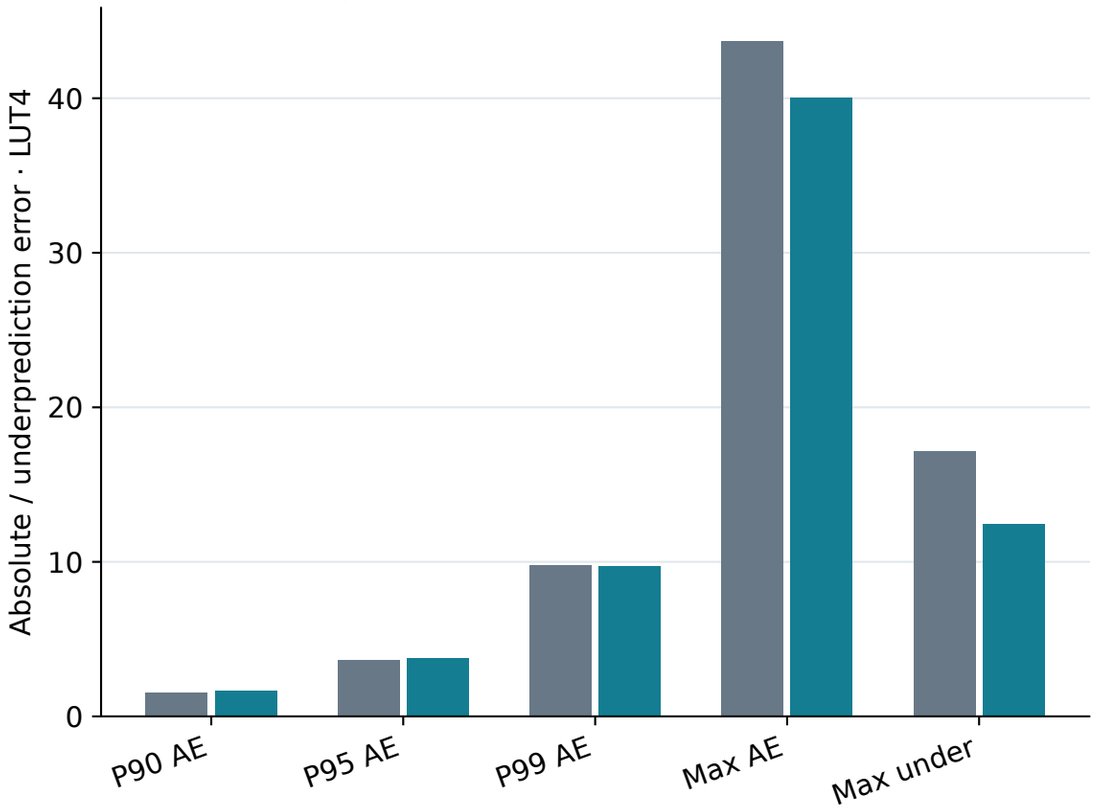
Membership tails and fixed-cap mistakes

Membership weighting · n=521; repeated formulas keep every program membership.

Frozen V6 Frozen V9

All membership tails



Cap errors and explicit denominators

Model	Cap	FA	FR	All n	True feasible	Pred. feasible
V6	32	1	10	521	373	364
V6	64	1	1	521	446	446
V6	128	0	0	521	498	498
V9	32	1	10	521	373	364
V9	64	1	1	521	446	446
V9	128	0	0	521	498	498

V6: pooled MAE 0.615; bias -0.077; RMSLE 0.178; zero n=160, zero MAE=0.000
V9: pooled MAE 0.632; bias -0.092; RMSLE 0.178; zero n=160, zero MAE=0.000
FA: predicted ≤ cap, actual > cap. FR: actual ≤ cap, predicted > cap. Infeasible denominators = all n − feasible.

All caps fixed prospectively at 32 / 64 / 128 LUT4. These counts do not establish calibrated safety or instruction-selector quality.
