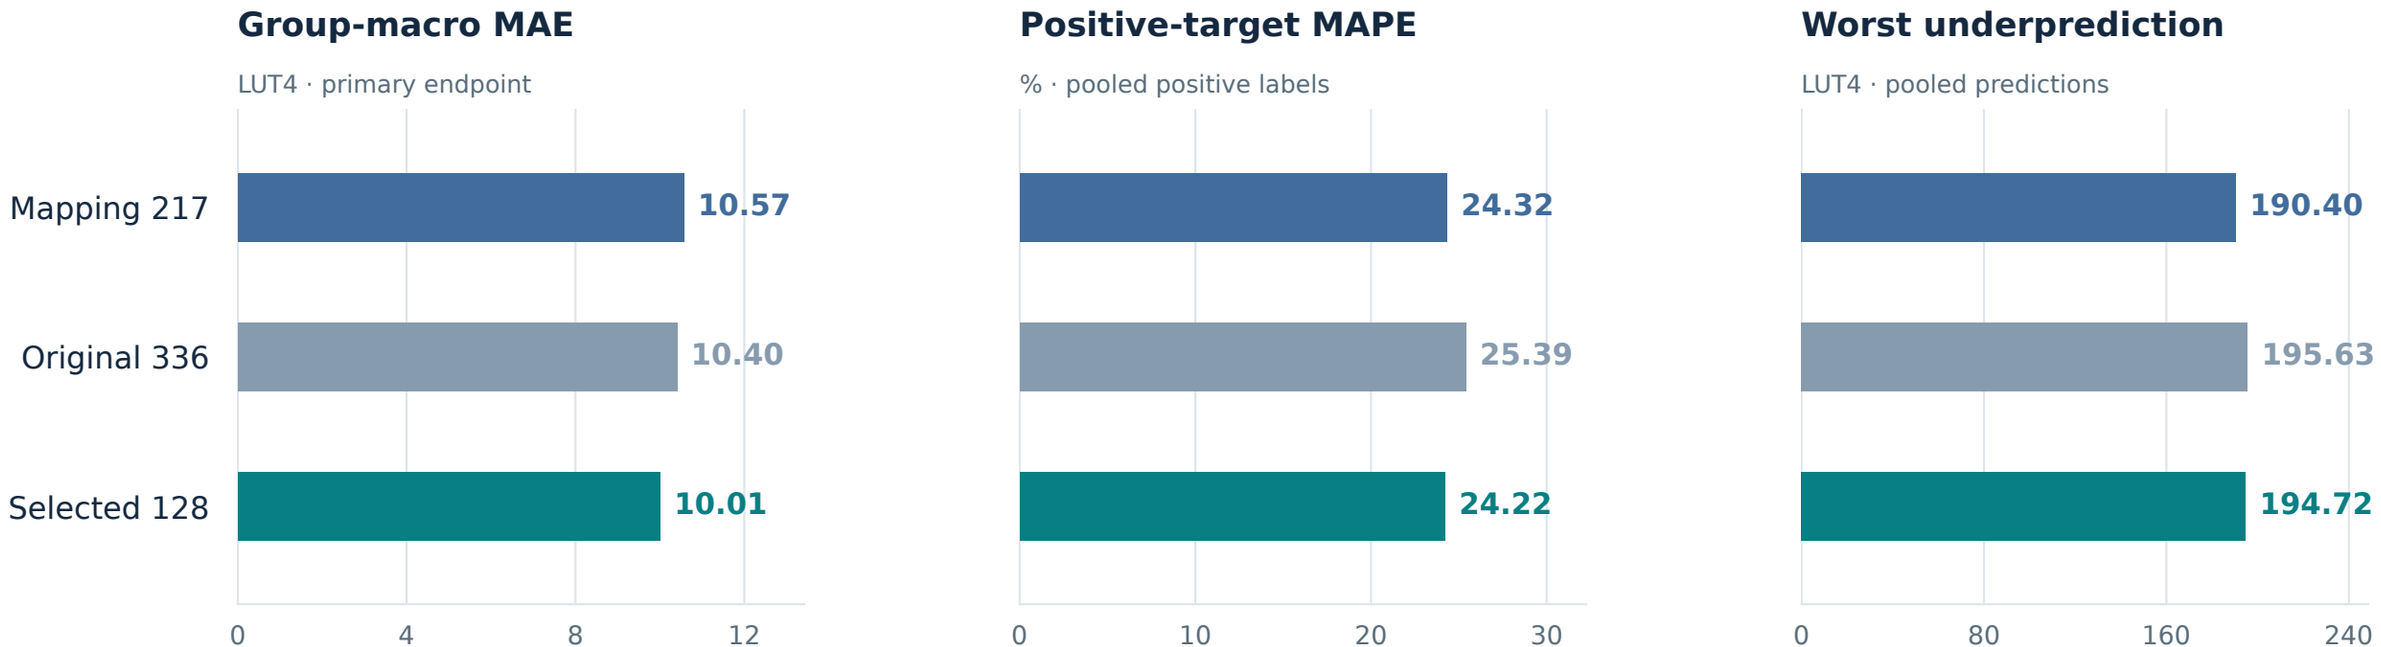
Matched comparison of feature representations

DEVELOPMENT CROSS-VALIDATION

5 matched folds · 1,665 circuit predictions · 522 groups · lower error is better



Consumed development cohort; these are not independent test results.

False-safe at cap 128 LUT4: Mapping 217: 10 · Original 336: 10 · Selected 128: 13 (prediction ≤128, actual >128)

MAPE uses 1,413 strictly positive labels. Worst underprediction = max(0, measured − predicted).

128 features selected within each training fold. Source: results/feature-comparison/summary.json
