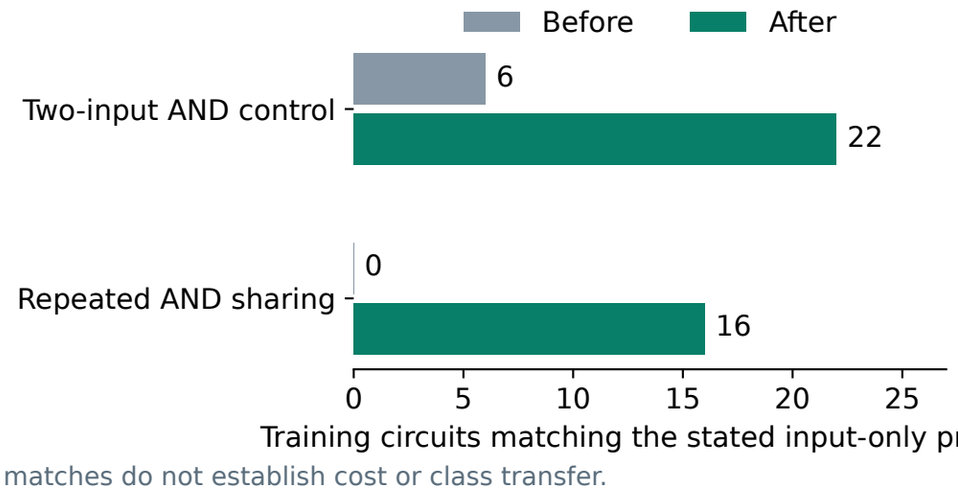
Targeted training coverage: fresh validation incomplete

One new classifier · 1,889 → 1,921 training circuits · unchanged 233 features and fixed 0.5 rule

Not promoted: development regressions; 39 of 55 fresh synthesis labels missing

Input-profile coverage in training



Profile matches do not establish cost or class transfer.

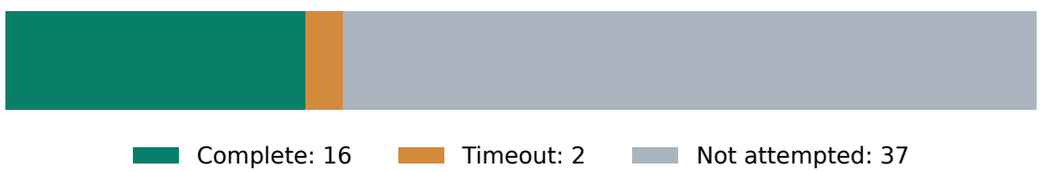
Retained required decisions

62/62 required acceptances pass

34/38 protected rejections pass

The sharing125 rejection is repaired.
Four protected unsafe cases are accepted.
Full panels: seven unsafe acceptances; four newly introduced.

Fresh labels: complete population required



Fresh MAE / MAPE: NOT EVALUABLE

All 55 fresh circuits passed RTL checks; only 16 have area labels.

Bounded execution

288.69 / 300 worker-seconds

152.03s stage wall time · peak 2 workers

32 training labels complete · one fit · no retries

87 circuits RTL-verified · 186,876 comparisons passed

Measured target: isolated iCE40 LUT4 count. Missing outcomes are retained; no partial-population accuracy or safety claim.
